about CEPF

Everyone depends on Earth's ecosystems and their life-sustaining benefits, such as clean air, fresh water and healthy soils. Founded in 2000, the Critical Ecosystem Partnership Fund is a global leader in enabling civil society to participate in and benefit from conserving some of the world's most critical ecosystems.

We provide grants for nongovernmental and private sector organizations to help protect biodiversity hotspots, Earth's most biologically rich yet threatened areas.

The convergence of critical areas for conservation with millions of people who are impoverished and highly dependent on healthy ecosystems for their survival is more evident in the hotspots than anywhere else.

Enabling a stronger voice, influence and action by civil societies is the hallmark of our approach. Our support equips civil society groups to conserve their environment and influence decisions that affect lives, livelihoods and, ultimately, the global environment for the benefit of all. Grant recipients range from small farming cooperatives and community associations to private sector partners and international organizations.

our grants

- Target biodiversity hotspots in developing and transitional countries.
- Are guided by regional investment strategies developed with stakeholders.
- Go directly to civil society groups to build this vital constituency for conservation alongside governmental partners.
- Create working alliances among diverse groups, combining unique capacities and eliminating duplication of efforts.
- Achieve results through an ever-expanding network of partners working together toward shared goals.

the partnership

L'Agence Française de Développement, the French Development Agency, is a financial institution that is at the heart of France's Development Assistance Policy. It supports a wide range of economic, social and environmental projects in more than 60 countries.

www.afd.fr

Building upon a strong foundation of science, partnership and field demonstration, **Conservation International** empowers societies to responsibly and sustainably care for nature for the well-being of humanity.

www.conservation.org

The Global Environment Facility is the world's largest source of funding for the global environment. It brings 178 member governments together with leading development institutions and others in support of a common global environmental agenda.

www.thegef.org

The Government of Japan is one of the largest providers of development assistance for the environment. Japan seeks constructive measures and concrete programs to preserve unique ecosystems that provide people with important benefits and help reduce poverty.

www.env.go.jp/en/

The John D. and Catherine T. MacArthur Foundation supports creative people and effective institutions committed to building a more just, verdant and peaceful world. In addition to selecting the MacArthur Fellows, the Foundation works to defend human rights, advance global conservation and security, make cities better places, and understand how technology is affecting children and society.

www.macfound.org

The World Bank is the world's largest source of development assistance. It works in more than 100 developing economies to fight poverty and to help people help themselves and their environment.

www.worldbank.org

message from the partners

Despite the challenges it faces, our planet continues to host magnificent natural areas that offer not only diverse life and beauty, but also essential support for humanity in the form of air and water purification, soil replenishment, climate regulation and other necessities.

Our joint investments through CEPF for civil society initiatives are designed to help ensure the sustainability of these critical ecosystems for both people and nature.

As we look toward the Fund's tenth anniversary in 2010, the many organizations we support continue to make important contributions to improving management of globally important biodiversity and to integrating conservation into land-use and development planning. The year will also be an important one for the international community as nations gather in Nagoya, Japan to assess progress toward their goal under the Convention on Biological Diversity to significantly reduce the rate of biodiversity loss by 2010.

In this report, we provide examples from the fiscal year of the impact CEPF grantees are having in the field. These range from a comprehensive forest and rangeland management plan that now guides land-use decisions in Armenia to new communal and national protected areas in Africa and Latin America. To date, our grant recipients have helped protect more than 10 million hectares and improved management of double that amount in rich ecosystems that are lifelines for communities and nations alike.

This year, our support enabled the CEPF global portfolio to grow to nearly \$114 million for innovative initiatives by more than 1,500 nongovernmental and private sector organizations. We also began preparing to expand the CEPF opportunity to three more of Earth's biodiversity hotspots: Caribbean Islands, Mediterranean Basin, and Maputaland-Pondoland-Albany in southern Africa.

We invite you to join us in building and supporting the vital role of stable and flourishing civil societies in preserving critical ecosystems for the benefit of us all.

James D. Wolfensohn, Chairperson, CEPF Donor Council

Monique Barbut, Chairperson and CEO, The Global Environment Facility

Toshinori Doi, Director for Development Policy Division, International Bureau, Ministry of Finance, Government of Japan

Robert L. Gallucci, President, John D. and Catherine T. MacArthur Foundation

Pierre Jacquet, Executive Director, L'Agence Française de Développement

Peter A. Seligmann, Chairman and CEO, Conservation International

Katherine Sierra, Vice President, Sustainable Development, The World Bank

hotspots where CEPF supported civil society

Earth's 34 biodiversity hotspots hold especially high numbers of unique species and provide important services for human well-being, such as clean air and water, flood and climate control, and soil regeneration, as well as food, medicines and raw materials. The hotspots, which face extreme threats, cover only 2.3 percent of the planet's land surface, and have each lost at least 70 percent of their original natural vegetation.

Hotspots where CEPF invested Investment planning under way Other hotspots

Note: Because of a reclassification of hotspot boundaries in 2005, originally defined investment areas for CEPF now stretch across two hotspots in some cases.

Through fiscal year 2009, CEPF had awarded grants to civil society partners in 18 hotspots to help protect vital ecosystems. During the year, CEPF also began developing strategies for new investments in three additional hotspots: Caribbean Islands, Maputaland-Pondoland-Albany and Mediterranean Basin.

2009 highlights

Left: Aerial view of Chiapas, Mexico.

Right: In Chiapas, coffee farmer Dimas Corzo works with tree seedlings as part of the Scolel Te program.

ecosystem services: forest pays dividends for farmers

Adalberto “Tito” Vargas Guillen recalls his first meeting with some 30 coffee growers in the Sierra Madre Mountains of Chiapas, Mexico. A project coordinator with the AMBIO Cooperative, Vargas was pitching a swap: conservation coffee for carbon offset payments.

Using balloons of carbon dioxide as models, Vargas briefed his audience on the carbon cycle, photosynthesis and global warming. One community elder weighed in. “We already knew that trees clean the air and supply us with oxygen,” said the man, Vargas recounts. “What we didn’t know was that we are the ones who are polluting the air.”

That insight and the chance for income led growers in eight villages to join *Scolet Te* (“The tree that grows” in the Mayan dialect of Tzeltal), an AMBIO-operated forestry program supported by CEPF.

Participating growers are interplanting their coffee with *Inga*, a tree that provides edible legumes and nitrogen-fixing bacteria that help fertilize the soil—plus partial shade for the coffee and habitat for birds and other species. Farmers are also planting other species of trees on their plantations and as living fences to control livestock movement. The additional trees absorb more carbon dioxide from the atmosphere, and companies and other entities looking to offset their emissions purchase carbon credits generated by the project, which in turn results in payments to the growers.

“There’s a great enthusiasm for this program among the people,” Vargas says.

Scolet Te has a strategic role to play in establishing green buffer zones between three protected natural reserves. The program will link the reserves of *El Triunfo*, *La Sepultura* and *La Frailescana*, strengthening biodiversity in the mountains of Chiapas.

Twelve other villages have joined the original eight and Vargas now counts upwards of 300 participants, thanks to additional support from Mexico’s National Commission of Natural Protected Areas.

Left: Zachary Parisa (right) from Yale University's Global Institute for Sustainable Forestry gathers forest data with students from the Armenian Agricultural Academy as part of the most in-depth forest evaluation in northern Armenia since the nation's independence in 1991.

Right: Tens of thousands of native trees seedlings have been planted in sustainable forestry plots as part of the Armenian Tree Project's reforestation effort.

sustainable forestry: Armenians plan a future with trees

In the mountainous country of Armenia, villagers, nonprofit organizations, academic institutions and the national government have teamed up to restore native tree cover and help residents manage their lands sustainably.

Supported by CEPF and WWF-Armenia, the Armenia Tree Project (ATP) and Yale's Global Institute of Sustainable Forestry conducted the most in-depth forest evaluation in northern Armenia since the nation's independence in 1991. In the process, ATP staff, Armenian Agricultural Academy forestry students and government employees learned data collection techniques, sampling design and inventory analysis. They created a comprehensive forest and rangeland management plan that now guides land-use decisions.

On the ground, the results are evident. Tens of thousands of native trees have been planted in demonstration plots in two neighboring communities. There is also a new community orchard where youth get environmental education and villagers receive range management training.

Another important outcome is a sustainable forestry training manual that is becoming an indispensable resource for training community members, local forestry students, conservationists and government officials.

As a result of these achievements, the German development bank KfW will finance planting 1.3 million additional trees, the largest reforestation initiative in Armenia's history. A private donor has also offered support to create a regional training center for environmental studies and sustainable forestry.

"The basis for success in a project of this magnitude is collaboration," says Jeff Masarjian, ATP's executive director. "The accomplishments of this partnership have brought sustainable forestry concepts to the forefront of environmental policy discussions in Armenia."

Left: Eri silk worms (*Antheraea asama*) on castor plant leaves in the village of Panbari on the western fringe of the Manas Tiger Reserve.

Right: Livelihoods project participants load yarn into a handloom during a training session.

livelihoods: new skills benefit people, park

Villagers living on the fringe of the Manas Tiger Reserve in northeastern India are learning new skills, boosting their income and changing their relationship with their lush but overtaxed ecosystem.

Traditionally, residents of this portion of the Himalayan foothills have used the forest to hunt and to harvest wood for energy and construction. They also set fires in grasslands to prepare them for livestock grazing and to make hunting easier. Unchecked, these activities could irreparably damage the ability of the reserve's rich ecosystem to provide its many benefits for people and wildlife.

To help these communities reduce dependency on the forest, CEPF supported the Dolphin Foundation to develop sustainable livelihoods for villagers living on the park's western edge. The Assam-based organization engaged government trainers to instruct representatives of community-based organizations in silk farming, apiculture, handloom weaving and marketing. These leaders then teach the techniques to villagers, help them access financial resources to establish businesses, and promote the alternative livelihood concept.

Interest has exceeded all expectations, with more than 200 residents in 12 indigenous villages now generating income from their chosen new vocations.

"We never thought that these types of livelihoods could put food on the table for our family," says Lakshmi Bala Ray, a silk farmer from the village of Boulazar. The income she generates, as well as the promise of firewood to be obtained from recently planted community forests, decreases her family's reliance on the forest.

Looking at the bigger picture, Sujit Bairagi, chairman of the Dolphin Foundation, notes that the villagers associate the project's benefits with the existence of the park and are now stepping forward to advocate for its protection.

Left: A student researcher supported by CEPF recently rediscovered the ornate shovel snout snake (*Prosymna ornatissima*) in what is now the Uluguru Nature Reserve in Tanzania. It had not been recorded there for more than 80 years.

Right: The natural rock arch called Bogenfels is found on the southern coast of Namibia in the Sperrgebiet region.

protected areas: nations move to preserve resources

In the vast arid plains and coastline of the Sperrgebiet region of Namibia and the lush forests of the Uluguru Mountains of Tanzania, nations took bold steps this year to protect ecosystems that are crucial to people and biodiversity.

The declaration of Sperrgebiet National Park in Namibia was a tremendous boon for the Succulent Karoo, one of just two desert biodiversity hotspots. The 2.6-million-hectare park remained virtually untouched for more than 100 years while under the control of mining companies who limited access. It is a refuge for nearly 25 percent of Namibia's plant species.

"The declaration of this area as a national park was the catalyst needed to create and consolidate a series of protected areas that will span the entire Namibian coastline," says Chris Brown, of the Namibia Nature Foundation (NNF). Such large swaths of natural habitat buffer climate change, predicted to alter rainfall patterns and threaten the resiliency of the area's plants.

CEPF supported NNF in development of management and tourism plans that include ecotourism concessions for nearby communities, allowing them to benefit from the growing influx of visitors.

Concerns about the impact of climate change also came into the fore in the declaration of the Uluguru Nature Reserve in Tanzania. Through the efforts of the U.N. Development Program and Global Environment Facility, and with support from CEPF, the Tanzanian government recognized the need to preserve these forests. Located west of Dar es Salaam, the new protected area links three forest reserves and a strip of previously farmed land to create a 24,000-hectare reserve.

Conserving these mountain forests protects the headwaters that feed the Ruvu River, the major water supply and source of hydroelectric power for millions of residents of Dar es Salaam and beyond. It also prevents the release of the carbon the forests store, averting furtherance of climate change.

Left: La Sierpa waterfall, Malaga Bay, Colombia.

Right: Women and men from local community gathering piangua mollusks in the mangroves near La Plata town, Malaga Bay.

community engagement: residents invest in natural wealth

Under the August sun, humpback whales churn the waters of Málaga Bay, on the southwest coast of Colombia. They come to breed and feast on the teeming sea life nurtured by coastal mangrove forests.

Afro-Colombians, the descendants of escaped slaves, hunt and harvest wood in these forests. The men fish in the bay and women gather the black-shelled piangua mollusks from the stilt-like roots of the mangroves.

Faced with a dwindling catch, the local community council took the lead in preserving this delicate ecosystem for future generations. Aided by CEPF, the council successfully advocated for the government's declaration creating the La Plata Integrated Management System and the Regional Natural Park of Sierpe reserves.

"The community has an interest in a protected area that would safeguard its access to the resources needed for subsistence," says Angela Andrade, Conservation International's policy coordinator in Colombia, noting local concerns about logging and poaching as well as diminished fisheries. Plus, a formal declaration from the government would head off periodic plans for a mega-port on the bay.

Northward, in the Mexican state of Veracruz, other communities pushed this year to establish new communal lands. Set aside to be locally managed for 50 years, they comprise the 1,000-hectare Grindstone reserve in La Cueva del Jabalí, the 722-hectare Spider Monkey Forest in Francisco Javier Mina, and the 654-hectare Pheasant Forest in Francisco Villa. The three villages have pledged to preserve trees, curtail poaching and logging, and guard the reserves.

It took a year of meetings to win local approval for the plan, says Paloma Mejía, project coordinator at Mexican nonprofit Pronatura, but ultimately, the people took the long view. "They want their sons and daughters to know the rainforest that they knew as children," Mejía says. To help sustain this spider monkey habitat, the plan includes developing eco-friendly enterprises as alternatives to traditional cattle farming.

Fondo de las Americas del Peru

2009 financial summary

CEPF continued to expand its support to nongovernmental and private sector partners during FY 09, awarding grants totaling \$12.9 million and bringing its global portfolio to nearly \$114 million for innovative efforts to conserve critical ecosystems. This year, the number of civil society groups supported by CEPF grew to more than 1,500.

As part of a major expansion and consolidation program taking place, grants awarded included support to civil society groups in the new investment regions of Indochina and Polynesia-Micronesia and targeted support to sustain gains made possible by our previous investments in five hotspots.

We also embarked on strategic planning for expansion to three additional hotspots: Caribbean Islands, Mediterranean Basin, and Maputaland-Pondoland-Albany in southeastern Africa. The investment planning process in these regions will not only guide CEPF investments, but also establish conservation priorities that can point the way for the many nations, organizations and other donors involved in these biologically rich yet threatened areas of the world.

Grants by Region for FY 09

Grants by Region through FY 09

■ Africa and Madagascar
■ Asia-Pacific
■ Europe and Central Asia
■ North and Central America
■ South America

* Grant expenses include new grants approved in FY 09 as well as financial amendments to grants committed in previous years.

* Negative amounts in grants represent grant deobligations.
