ANNUAL REPORT

CRITICAL | **ECOSYSTEM**
PARTNERSHIP FUND

PROTECTING NATURE'S HOTSPOTS
FOR PEOPLE AND PROSPERITY

ABOUT CEPF

The Critical Ecosystem Partnership Fund (CEPF) empowers people to be good stewards of the planet, so they and future generations continue to benefit from its life-sustaining resources like clean air, fresh water, a stable climate and healthy soils. The partners believe that civil society is uniquely positioned to protect some of Earth's most biologically rich yet threatened ecosystems.

CEPF provides grants to nongovernmental and private sector organizations so they can conserve these critical ecosystems, located in biodiversity hotspots. The investments are even more meaningful because these regions are home to millions of people who are impoverished and highly dependent on natural resources.

Enabling civil society groups to have stronger voices and exert greater influence in the world around them is the hallmark of our approach. Our grantee partners range from small farming cooperatives and community associations to private sector partners, and national and international nongovernmental organizations (NGOs).

OUR GRANTS

- **TARGET BIODIVERSITY HOTSPOTS IN DEVELOPING AND TRANSITIONAL COUNTRIES.**
- **ARE GUIDED BY REGIONAL INVESTMENT STRATEGIES (ECOSYSTEM PROFILES) DEVELOPED WITH STAKEHOLDERS.**
- **GO DIRECTLY TO CIVIL SOCIETY GROUPS TO BUILD THIS VITAL CONSTITUENCY FOR CONSERVATION ALONGSIDE GOVERNMENTAL PARTNERS.**
- **CREATE WORKING ALLIANCES AMONG DIVERSE GROUPS, COMBINING UNIQUE CAPACITIES AND ELIMINATING DUPLICATION OF EFFORTS.**
- **ACHIEVE RESULTS THROUGH AN EVER-EXPANDING NETWORK OF PARTNERS WORKING TOGETHER TOWARD SHARED GOALS.**

MESSAGE FROM THE
**EXECUTIVE
DIRECTOR**

Our mission, enacted through the work of our grantees, is both critical and challenging. CEPF has chosen to support civil society in protecting biodiversity and other vital natural resources in areas that are threatened by a variety of forces—economic, political and climatic. In these places, which are frequently subject to violent and catastrophic events, as well as the everyday struggle for life, conservation

may appear relatively unimportant. But dwindling resources are often at the foundation of the worst calamities suffered by human beings and nature.

The community leaders, farmers, park rangers, researchers, and staff members and volunteers of nonprofit organizations of all sizes whom CEPF supports deserve our funding and our thanks. Not only are they improving the well-being of the people and areas where they live and work, but they are also contributing to a more secure future for us all.

CEPF dedicates this report to its grantee partners, and in these pages we highlight a few of their many achievements, including

- Development of a conservation strategy for the East Melanesian Islands biodiversity hotspot, led in part by regional universities and including input from 150 representatives of government, civil society, academia and local communities.

- Efforts of grantees in Mozambique to build local capacity while setting up sustainable use and livelihoods programs to protect a key elephant corridor and the communities nearby.
- Establishment of local co-management and protection of fisheries that provide food security in Lao PDR.
- The success of the Caucasus Nature Fund in working with multiple donors to set up long-term support for important protected areas in the region.
- A flourishing incentive program that is making conservation an economic boon to local communities and indigenous groups in Ecuador.

These initiatives represent just a small portion of the impressive conservation work being done by civil society groups around the world. Without them, there would be no CEPF, and far less cause for hope regarding the ecosystems that are fundamental to the future of our planet.

Patricia Zurita

Executive Director, CEPF

MESSAGE FROM THE
CHAIRPERSON,
CEPF DONOR COUNCIL

In the late 1990s, Conservation International CEO Peter Seligmann and I began talking about the need for an organization that would empower civil society organizations around the world to conserve and protect critical ecosystems—those that provide irreplaceable beauty and biodiversity as well as vital goods and services for people. In the year 2000, through the commitment of farsighted donors, the idea became reality.

For 12 years now, CEPF has been connecting its global donors to conservation initiatives inside the world's biodiversity hotspots, working with local NGOs, communities, private-sector partners and others to support smart ecosystem management and sustainable development. I am proud of CEPF's demonstrated success and growth. Working with local stakeholders, CEPF has crafted conservation strategies known as ecosystem profiles for 22 biodiversity hotspots, providing a plan of action that not only guides CEPF's investments, but also maps out opportunities for other conservation investors. CEPF has implemented such plans in developing and transitional countries in Central and South America, Africa, Asia, the Pacific Islands and Europe. The fund has reached out to organizations in more than 60 nations and territories, helping farmers practice eco-friendly cultivation methods that boost their profits, working with communities to sustainably manage the forests and fresh water environments they depend on, and supporting nongovernmental groups' work with government agencies to factor

wise natural resource management into development planning. These activities, and many more types of engagement, are making a difference, both in terms of direct environmental impact and in building up local and national civil society for future environmental leadership.

After these many years with CEPF, as I step down from my post as chairperson of the fund's Donor Council, this progress fills me with hope and confidence. Though there is so much urgent work that remains to be done to protect and restore the world's ecosystems, I am certain we are heading in the right direction. CEPF continues to prove that empowering civil society in the most biodiverse yet threatened areas of the world is an efficient, effective and sustainable approach. We are seeing the early dividends of CEPF's strategic outreach to the people who have the most at stake in the battle to protect the world's most crucial ecosystems, and who are best positioned to make a positive difference over the long term. The momentum is building. Be a part of it.

A handwritten signature in black ink, which appears to read "Jim Wolfensohn". The signature is fluid and cursive.

James D. Wolfensohn, chairman of the private investment firm Wolfensohn & Company, LLC, is a former president of the World Bank Group and was one of the founders of CEPF. He served two terms as Donor Council chairperson, from the fund's inception in 2000 to 2005, and again from 2008 to 2012.

THE PARTNERSHIP

L'AGENCE FRANÇAISE DE DÉVELOPPEMENT,

the French Development Agency, is a financial institution that is at the heart of France's Development Assistance Policy. It supports a wide range of economic, social and environmental projects in more than 60 countries.

www.afd.fr

CONSERVATION INTERNATIONAL

is a trusted adviser to communities, corporations and governments. Grounded in science, partnership and field demonstration, CI advances innovative solutions that protect nature to ensure the well-being of everyone on Earth.

www.conservation.org

THE EUROPEAN UNION,

comprised of 27 member states, is the largest single provider of development aid in the world. The EU development policy recognizes biodiversity as a crucial element for human well-being through the production of food, fish, fuel, fiber and medicines; the regulation of water, air and climate; and maintenance of land fertility. Through EuropeAid, the EU invests in biodiversity and development projects in more than 100 countries.

<http://europa.eu>

THE GLOBAL ENVIRONMENT FACILITY

is the world's largest public funder of projects to improve the global environment. The GEF unites 182 member governments together with leading international development institutions, civil society organizations and the private sector in support of a common global environmental agenda.

www.thegef.org

THE GOVERNMENT OF JAPAN

is one of the largest providers of development assistance for the environment. Japan seeks constructive measures and concrete programs to preserve unique ecosystems that provide people with important benefits and help reduce poverty.

www.env.go.jp/en

THE JOHN D. AND CATHERINE T. MACARTHUR FOUNDATION

supports creative people and effective institutions committed to building a more just, verdant and peaceful world. In addition to selecting the MacArthur Fellows, the foundation works to defend human rights, advance global conservation and security, make cities better places, and understand how technology is affecting children and society.

www.macfound.org

THE WORLD BANK

is the world's largest source of development assistance. It works in more than 100 developing economies to fight poverty and to help people help themselves and their environment.

www.worldbank.org

MESSAGE FROM THE PARTNERS

A healthy future of the world's vital ecosystems is best achieved through joint action. This idea is central to CEPF. There are many individuals and organizations around the world who are working hard to protect natural resources and help people sustainably use those resources. When these people and groups come together and operate under a common plan, the potential for positive impact and success grows dramatically.

CEPF has some impressive results of its own: more than 1,700 grantee partners, \$148 million in committed grants, 11.2 million hectares of key ecosystems formally protected, improved management of 29.7 million hectares of key biodiversity areas and strengthened management and protection of 3.6 million hectares of production landscapes from inception through fiscal year 2012. But these numbers aren't really CEPF's alone. They are the product of an approach that relies on partners far and wide.

In the course of the fiscal year, new connections among donors built on CEPF strategies and results. CEPF continued to strengthen ties to the European Union (EU), efforts that led to establishment of the EU as a new global donor partner in fiscal year 2013. (Please see insert in this report.) CEPF donor partner the MacArthur Foundation joined with the Margaret A. Cargill and McKnight foundations to support an update to CEPF's profile of the Indo-Burma Hotspot, with intentions to use the resulting conservation plan to guide and coordinate their investments in the region with CEPF's upcoming reinvestment. And the MAVA and Prince Albert II of Monaco foundations, which supported development of the ecosystem profile for the Mediterranean Basin, used the profile's strategy in developing their own investment plans.

Meanwhile, CEPF continued its efforts to convene conservation agents from the grassroots to global levels and catalyze coordinated action. Through ecosystem profiling efforts in the Eastern Afrotropical, East Melanesian Islands and Indo-Burma biodiversity hotspots, CEPF gathered information from representatives of local communities, governments, conservation organizations in the regions, scientists, academic institutions, and donors to gain a nuanced understanding of

these areas and how best to shore up their natural wealth. Through continued implementation of strategies developed in previous profiling, grantees are working with communities in the Western Ghats of India, the Caribbean Islands, and Maputaland-Pondoland-Albany in southeastern Africa to implement innovative solutions to sustain key ecosystems in these regions.

All of these developments point to the growing impact and promise of coordinated conservation. While the challenges remain great, so too is the potential for positive change. It's an exciting time to be part of this partnership, and we welcome all who share the goal of robust and enduring ecosystems and communities.

WHERE
CEPF WORKS

Earth's 35 biodiversity hotspots hold especially high numbers of unique species and provide important services for human well-being, such as clean air and water, flood and climate control and soil regeneration, as well as food, medicines and raw materials. The hotspots, which face extreme threats, cover only 2.3 percent of the planet's land surface and have each lost at least 70 percent of their original natural vegetation.

Through fiscal year 2012, CEPF had awarded grants to civil society partners in 21 hotspots in support of its strategies for protecting critical ecosystems in these regions. During the 2012 fiscal year, CEPF staff and regional partners convened to work on an ecosystem profile, including a detailed conservation strategy, for the East Melanesian Islands Hotspot in the South Pacific.

Note: The Eastern Arc Mountains and Coastal Forests of Tanzania and Kenya Hotspot was divided in 2005; a portion of it is now part of the Eastern Afromontane Hotspot, and the remainder is part of the Coastal Forests of Eastern Africa Hotspot. Before the separation, CEPF had initiated an investment in the original Eastern Arc Hotspot, and through that investment awarded grants in portions of the hotspots that are now known as the Eastern Afromontane and the Coastal Forests of Eastern Africa.

ECOSYSTEM PROFILING

Using local guidance to map out conservation

In the southwestern Pacific Ocean, north and east of Australia, the line of volcanic islands known as East Melanesia draws a dotted arrow across the map, sweeping in parts of Papua New Guinea and all of the Solomon Islands and Vanuatu. These 13,500 square kilometers of tropical habitats, along with their coastal waters, shelter some of the most striking and largely unchronicled life forms on Earth.

An array of pteropodid bats, known locally as flying foxes, munch on mangoes and suck the nectar from night-blooming flowers. The Solomon Islands skink—the world’s largest reptile of this kind—slithers along tree branches using its prehensile tail for balance. Flashing jewel-toned feathers, fruit doves flutter in the rain forests, and soaring above the entire archipelago is the Solomon eagle, a totem for some of the local peoples. These animals represent just a few of the islands’ more than 300 globally endangered species.

As spreading agriculture, poaching, logging, mining, population pressures, and climate change combine to threaten this singular region, an international team assembled by CEPF recently took a huge step toward its long-term protection. The University of the South Pacific partnered with the University of Papua New Guinea and Conservation International’s Pacific Islands Program to lead and steer the production of the ecosystem profile, a comprehensive assessment and strategy for the region that includes a five-year investment plan for CEPF.

Too often, such plans take a “top-down approach,” said Job Opu of the University of Papua New Guinea, who served as the regional coordinator for the profiling team. Despite the geographical difficulties and the widespread location of the communities in the hotspot, the team went out of its way to involve area residents, scientists, donors, government agencies and civil society organizations in its deliberations. “We went right to the local communities,” Opu said. “Everyone and anyone had a say in what we were trying to achieve.”

Taking an inclusive approach makes sense for conservation efforts in Melanesia, as 90 percent of the lands are owned by local communities.

“For the project to be successful, we have to have the full support of the communities,” said Opu. “They have to feel ownership as well.”

It’s also an opportunity to gather local knowledge. “The ecosystem profile is very, very critical because in most cases, the species names are not known [to more than a few people],” said Marika Tuiwawa, director of the South Pacific Regional Herbarium in Fiji and another team member.

The people of Melanesia offer their own rich diversity. Papua New Guinea is home to more than 800 languages, and the Solomon Islands and Vanuatu each have upwards of 100 more. “You really have to be an anthropologist and sociologist before you’re a biologist in Melanesia,” said Roger James, a member of the ecosystem profile team.

Melanesians depend on the natural environment for their own sustenance. “People are part of the ecosystem,” said James. For example, local residents fish in the warm seas that surround their islands and hunt some of the larger birds and mammals, such as the flying foxes and giant rats. In fact, human encroachment into natural areas, in the form of settlement and farming, is rapidly growing. “It’s a bit of a race against time,” warned Tuiwawa, “because these areas have been neglected in the past.”

As the project turns from analysis toward action, word is going out in public service announcements over radio stations across East Melanesia that local communities can apply for grants toward conservation projects. The future of the region’s extraordinary fauna and flora lies, fittingly, in the hands of the people with whom they share these islands.

The ecosystem profile for the East Melanesian Islands Hotspot was approved by the Donor Council in December 2012 and the regional implementation team (RIT) will be recruited in 2013.

“The profile work that we have done and the subsequent support and investment by CEPF is timely and very much appreciated by our communities and NGOs and community-based organizations throughout the East Melanesian Islands.”

Job Opu of the University of Papua New Guinea, who served as regional coordinator for the ecosystem profiling team

COLLABORATIVE CONSERVATION

Strengthening NGOs and local economy via corridor protection strategy

Elephants once lumbered in safety through the subtropical thickets that dot Africa's southeast coast. Today, the interlocking efforts of conservation groups in Mozambique could make that possible once more. Along the country's Futi Corridor, part of the Maputaland-Pondoland-Albany Hotspot, the Italian NGO Cesvi Fondazione Onlus and a half dozen other local and international NGOs are building local capacity for conservation. In a model of grant-making synergy, a five-year investment by CEPF supports all seven groups.

The Futi Corridor is a ribbon of land just 100 kilometers long and 10 kilometers wide that hugs the Futi River between Mozambique's capital city of Maputo to the north and the country's southern border. Yet the corridor serves as a vital highway for elephants migrating between Maputo Special Reserve and Tembe Elephant Park in South Africa. Over the years, slash-and-burn agriculture, poaching and charcoal production have put pressure on this ecosystem, which is also a haven for smaller mammals, subtropical birds, and, along adjoining ocean front to the north, marine turtles.

In 2011, the Mozambican government established the Futi Corridor as a protected area. With its constellation of grantees on the ground, CEPF aims to help turn that formal move into a practical reality by involving area residents in education and economic activity that builds prosperity as it safeguards biodiversity.

Cesvi is coordinating three Mozambican CEPF grantees—Kuwuka, Associação Para o Desenvolvimento Comunitário (LUPA) and Associação Rural de Ajuda Mutua (ORAM)—as the four groups work in 11 villages in the Futi Corridor to spread the word about living with wildlife in a way that sustains both threatened species and a tenuous local economy. In one joint effort, LUPA, HELVETAS Swiss Intercooperation, the International Union for the Conservation of Nature, Cesvi and the local community launched the Center for Biodiversity Conservation of Madjeane near the entrance of Maputo Special Reserve.

The center offers monthly training sessions for two “community agents” from each of the 11 villages in managing use of natural resources, reporting illegal activities (such as poaching), monitoring pollutants and learning other conservation skills. “Selected by the community, they work within the community,” explained Paolo Felice, Cesvi's country representative.

In the reserve, the brilliant-colored Neergaard's sunbird sips nectar from flowers and the western banded snake eagle shadows its prey. These are among 18 endemic avian species that BirdLife International, another CEPF grantee here, wants to protect in an effort to forestall the kind of sharp decline seen among blue swallows elsewhere in the hotspot. As a first step, the group is recruiting local residents to train as birding guides and lodging hosts for future ecotourism. BirdLife staff members also are conferring with national activists to lay the groundwork for a new conservation organization based in Mozambique.

Along the shores of the Indian Ocean, other CEPF grantees are adding their efforts toward a sustainable future. Centro Terra Viva protects and monitors leatherback and loggerhead marine turtles in Ponta do Ouro Partial Marine Reserve. Meanwhile, the African Safari Lodge Foundation is partnering with the Ministry of Tourism to develop a 30-room ecotourism lodge in this coastal area. Local residents will build, operate and supply the lodge, which could yield a host of economic benefits for three villages nearby.

These complementary efforts to secure natural areas, improve community livelihoods, strengthen local organizations and develop sound enterprises are weaving together a foundation for long-term conservation and human well-being. “Whatever you do in a rural environment takes a long time,” said Cesvi's Felice, a 12-year veteran of development work in Africa. “You're building trust and then banking on that trust to make a difference.” Here in Mozambique, seven NGOs are tapping that trust and the power of synergy as they work side by side to preserve a priceless habitat.

One of CEPF's values as a granting mechanism is its role in building synergies among proposals and grantees to foster collaboration and future networking while ensuring that investments are complementary and results are cumulative. This approach enables grantees to achieve not only project-specific goals, but also more regional and sustainable impact.

LIVELIHOODS + FOOD SECURITY

Thriving through co-management of freshwater biodiversity

For the communities of the Sekong Basin in Lao PDR, life is built on fish. Here 61 percent of the protein intake for communities comes from fish, and 19 percent of the fish caught are sold for income.

A loss of fisheries productivity and diversity would lead to economic and health problems for the people of the basin. But this could be the fate of the region, as fish populations are threatened by increased demand, destructive fishing methods, dams, extraction of forest products, and poor management.

As part of the Indo-Burma Hotspot strategy, CEPF supported a World Wide Fund for Nature (WWF) project aimed at demonstrating to policymakers the importance of healthy freshwater ecosystems for poverty alleviation and biodiversity conservation in the Sekong Basin. Over a two-year period, from 2010 to 2012, the project fostered the development of community groups to protect critical freshwater habitats through fisheries co-management.

Based on the Integrated River Basin Management approach, co-management was arranged between local communities and the government. This gave communities that use fisheries the authority to demarcate protected areas, called “fish conservation zones,” to reduce or prohibit fishing in critical habitat and enforce village regulations in these areas. Every fish conservation zone has an associated management committee made up of local villagers that is responsible for maintaining freshwater protected areas.

“The watershed management and monitoring plans have to be owned and adopted by the communities to be effective,” said Somphanh Chanphengxay, head of the Livestock and Fisheries Department Planning and Cooperation Division at the Lao Ministry of Agriculture and Forestry. “In the long run, that will be the only way to manage the biological diversity of our rivers and secure their watershed functions.”

Khamchanh Pochoum, chief of Ban Xenoi Village, was in favor of the co-management arrangements. “We have already tried to make some regulations, to forbid the use of dynamite and poison, but there was no enforcement of this. I fully support the idea of working together; otherwise fishing will die out here in Ban Xenoi.”

The project established communal fishing conservation areas for 24 villages along 500 kilometers of riparian habitat in the Sekong Basin. WWF worked with these communities to draft fish conservation zone management plans that gained endorsement from the district governor. Additionally, the biodiversity and ecosystem services values of the Sekong Basin were integrated into development planning, both at the local level in the fisheries and agriculture sectors, and at the national level in hydropower planning.

The positive impact on the local communities and fisheries has been tremendous: 75 percent of the communities reported more fish in the conservation zones. “Communities consistently report increased availability of wild fish within one or two years of conservation zones being established,” said Victor Cowling, technical advisor for sustainable hydropower and river basin management with the WWF Greater Mekong Program. “This aquatic resource conservation benefits peoples’ livelihoods and nutrition.”

Although important for human well-being, the Sekong Basin also supports populations of at least 15 CEPF priority species, including Asian giant softshell turtles (*Pelochelys cantorii*), giant freshwater stingrays (*Himantura polylepis*) and Jullien’s golden carp (*Probarbus jullieni*). In addition, the project has enhanced connectivity between existing protected areas, thereby bringing conservation benefits to migratory fish. The project was also successful in increasing scientific knowledge of fish, with five species new to science being discovered during the project’s fish taxonomy survey of the Upper Xe Khaman, a tributary of the Sekong River.

Since project completion, the freshwater protected areas continue to receive support from the Department of Livestock and Fisheries. Cowling noted that the fish conservation zone approach is already being replicated in a project funded by Oxfam Novib in three central provinces of Lao PDR.

“We have already tried to make some regulations, to forbid the use of dynamite and poison, but there was no enforcement of this. I fully support the idea of working together; otherwise fishing will die out here in Ban Xenoi.”

Khamchanh Pochoum,
chief of Ban Xenoi Village

CONSERVATION INCENTIVES

Making conservation pay off for Ecuadorians

Along the northwestern Andean foothills and coastal plains of Ecuador, lush rain forest carpets the landscape as far as the eye can see. The cackles of great green macaws can be heard overhead, while on the ground frogs hidden from view call out. In this enchanted corner of the Tumbes-Chocó-Magdalena biodiversity hotspot, a quiet revolution is taking place, bridging conservation and development.

Ecuador's Socio Bosque program sets up 20-year conservation agreements with individual property owners and communities in exchange for direct economic incentives that support community development projects. It has proven to be one of Latin America's most promising models for linking conservation with economic, health and education benefits for poor rural indigenous, mestizo and Afro-descendent people. CEPF and its partners have played instrumental roles in the genesis of the program, and now in its implementation.

CEPF first supported the conservation agreements in the region in 2004 when a pilot project was established through an innovative partnership between Conservation International (CI) and Deutsche Gesellschaft für Internationale Zusammenarbeit (the German Agency for International Cooperation). It targeted three Chachi indigenous communities. With few options for income, the Chachi people had been selling their forests to logging companies and palm oil producers. Their experience reflected broader trends within Esmeraldas Province. From 1960 to 2010, the province lost 82 percent of its forest cover, making it the top area in South America in deforestation threat.

Through the deal, the Chachi communities received financial and technical support in exchange for their commitment to conserve 7,200 hectares of rain forest known as the Gran Chachi Reserve. They agreed on compensation of \$5 per hectare per year, paid into a fund that communities allocated for their development priorities. Meanwhile, their establishment of the reserve created a protective buffer for the neighboring 243,638-hectare Reserva Ecológica Cotacachi-Cayapas (RECC), one of the hotspot's most biologically rich protected areas. Ecuador's program has become a national force for conservation, with government investment totaling more than \$22 million. By 2012, four years after its creation, more than 1,116,000 hectares had been set aside for conservation, and more than 125,000 individuals had directly benefited.

"Socio Bosque has positioned Ecuador as a pioneer within the international community in forest conservation," said Luis Suarez, director of CI's Quito office. "The government has demonstrated its firm commitment to Socio Bosque by funding it almost entirely from the national treasury. And the program is achieving what few conservation initiatives have been able to do in the past: successfully stopping rampant deforestation in the areas where it is implemented while bringing grassroots development to Ecuador's most remote and poorest communities."

Following its support for Socio Bosque's pilot phase, CEPF continued supporting the initiative by helping communities access the program's funds. CEPF grantee Fundación para el Desarrollo de Alternativas Comunitarias de Conservación del Trópico (Altropico), an Ecuadorian NGO, has worked closely with six Chachi communities to qualify their forests for Socio Bosque, and then to maintain their eligibility. With Altropico's assistance, Socio Bosque incorporated 13,539 hectares of forest that belong to the Chachi, generating \$175,841 in 2012 for the participating communities. The 20-year agreement period will yield more than \$3.5 million for these communities.

Associated community projects have met many needs. Along the border of RECC, Chachi and Afro-descendent communities and the Ministry of the Environment worked together to settle unclear land boundaries. As a result, local communities secured their land titles. Socio Bosque communities have hired community park guards who earn up to \$20 a day. And for the first time, Chachi communities regularly pay for school supplies and teachers' salaries, and their children can now attend high school. Suarez noted that Peru and Bolivia have already modeled their own conservation incentive programs on Socio Bosque, and other countries are closely monitoring its progress for potential replication.

"While many challenges still remain, the situation is changing dramatically," said Jaime Levy, the executive director of Altropico. "Chachi communities manage their Socio Bosque investments in democratic ways involving all citizens—men, women, children and the elderly. They are setting their own development priorities and, in the process, becoming empowered to chart their own futures."

"The Chachi believe that their children's future is based on conserving their forests instead of destroying them. With Socio Bosque, the Chachi have options for earning money and for meeting their needs. We no longer see loggers, gold miners, or owners of African palm oil plantation on Chachi lands. They are not invited here anymore. This was unimaginable just eight years ago."

Ramiro Valencia, Altropico's technical advisor, who has worked closely with the Chachi for eight years

LONG-TERM FINANCING

Securing the future of a mountain paradise

A half-day's flight east of London and Paris, between the Black and Caspian seas, lies a little-known region where snow-capped peaks rise higher than the Alps and some 50 globally threatened animals make their home. Here the rare Caucasian leopard stalks its prey, the tur (an endemic mountain goat) ambles in alpine meadows, and the Caucasian salamander flashes its yellow spots in woodland streams.

"This is the Yellowstone [National Park] of Europe," said David Morrison, executive director of the Caucasus Nature Fund (CNF), of the region. "This is Europe's backyard, its Wild East." In fact, the Caucasus Mountains comprise a whole set of protected areas, some 25 scattered among several countries.

CNF, a CEPF grantee that was created in part by CEPF's investment, supports nine of these protected areas in three of the nations that divide the region: Armenia, Georgia and, recently, Azerbaijan. Looking ahead, the Paris-based fund aims to expand its work to 17 more protected areas over the next five years.

In the region, lack of financial support for existing parklands has hampered conservation. With an eye to better stewardship of Caucasian biodiversity, CNF was created to provide grants for up to half of the costs of managing or developing protected areas, with the other half furnished by the relevant national government.

As part of its initial five-year investment in the Caucasus Hotspot, CEPF provided \$500,000 in 2008 and 2009 to support the institutional development and cover start-up costs for the fund. Additional CEPF funding in a consolidation phase for the region in 2011 and 2012 paid program-related expenses for a 15-month period, allowing all returns on the endowment to be allocated for grants. The grant also supported the development and implementation of fundraising strategies to build the fund's endowment, as well as an expanded grants and technical assistance program.

CNF scored two big successes in 2012, securing a grant of €7 million from the German government through its Ministry of Economic Cooperation and Development and its development bank, KfW, bringing the total size of the fund to \$50 million. Over the coming years, this major new grant will fund supplementary pay for park rangers,

equipment like binoculars and camera traps, and transport for park staff, including horses and motor vehicles suitable for the terrain of the protected areas. All of this support is designed to reduce the impact of poaching, illegal logging, overgrazing and human settlement around the protected areas.

With the help of CEPF, the past year also saw CNF expand from Georgia and Armenia into oil-rich Azerbaijan, where it launched a pilot project at Shirvan National Park, a coastal area easily reached by car from the capital city of Baku. As part of an effort to boost ecotourism, the Shirvan project supported the construction of three bungalows for park visitors and repair of roads and fences.

Like other CEPF grantees, CNF factors human communities into the conservation equation. "Tourism is beginning to take off in the protected areas," said Morrison, who has seen an initial trickle of visitors to the region swell to double or triple its volume five years ago. Along with their unrivaled wildlife, the Caucasus Mountains offer opportunities for hiking and skiing, which in turn create economic potential for ecotourism in the form of hotels, lodges and more.

Meanwhile, CNF's new work in Azerbaijan holds hope in particular for one threatened species at Shirvan National Park, which hosts the region's largest population of the goitered gazelle (*Gazella subgutturosa*), a native of steppe and semidesert habitats that was nearly hunted to extinction over the past century. Some 60,000 gazelles grazed in the shadow of the Caucasus Mountains century ago, yet by 1961 only 130 remained. Conservation measures helped stem the attrition of these graceful animals. As a result, their numbers in Shirvan National Park and other nearby protected areas have surged to more than 5,000. Given this healthy remnant, Morrison plans to partner with the Georgian government to reintroduce the gazelles in protected areas there.

In a region long riven by tensions between neighboring nations, CNF's efforts hold the potential to build bridges between age-old adversaries as they work to restore the gazelle population in the lands they share.

Number of Existing or Planned CTFs Supported by CEPF by Continent

Since its inception in 2000, CEPF has supported several projects focusing on the creation and strengthening of conservation trust funds (CTFs). It has provided grants to 12 projects that have successfully established CTFs, which amounts to about 20 percent of all such funds worldwide. CEPF also provided support to five pre-existing CTFs to enable projects not covered by the funds' operational budget.

FINANCIAL SUMMARY

During the 2012 fiscal year, CEPF received grants of \$9.875 million from the government of Japan and \$3 million from the World Bank's Development Grant Fund, bringing the total revenue to date to \$233 million.

CEPF awarded \$12.6 million in grants during fiscal year 2012, bringing the amount it has invested in conserving critical ecosystems since 2000 to \$148 million. By the end of the fiscal year, more than 1,700 grantees had received support from the fund since its inception.

The fund moved forward with grants in support of implementing the strategy for the Mediterranean Basin Hotspot. CEPF continued granting to civil

society organizations in the Caribbean Islands, Maputaland-Pondoland-Albany, Indo-Burma, Polynesia-Micronesia and the Western Ghats Region of India. The fund also dispersed targeted support to sustain gains made possible by previous investments in the Caucasus, Eastern Arc Mountains and Coastal Forests and Mountains of Southwest China. Meanwhile, CEPF completed the ecosystem profile for the Eastern Afromontane Hotspot, updated the Indo-Burma ecosystem profile, and commenced the profiling process for the East Melanesian Islands.

STATEMENT OF
ACTIVITIES

For fiscal year ended June 30, 2012

REVENUE	FY12	CUMULATIVE
Grants and Contributions	12,875,000	229,261,650
Gain (Loss) on Foreign Exchange	(602,900)	1,480,446
Interest Earned	122,047	2,283,990
TOTAL REVENUE	\$12,394,147	\$233,026,086
EXPENSES AND GRANTS AWARDED
